Is the following the following sequence of the following sequence of adenjate cyclase and displays high constitutive activity (spontaneous activity in the absence of agonist). Agonist stimulation of isoform 3 niether modified adenjate cyclase activity nor induced intracellular calcium

mobilization. SUBCELLULAR LOCATION: Integral membrane protein. ALTERNATIVE PRODUCTS: ++

Event=Alternative splicing; Named isoforms=7; Comment=Additional isoforms seem to exist;

IsoId=Q9Y5N1-1; Sequence=Displayed; Name=1

IsoId=Q9Y5N1-2; Sequence=VSP_001886; Name=3; Synonyms=H3S; IsoId=Q9Y5N1-3; Sequence=VSP_001885; Name=2;

IsoId=Q9Y5N1-4; Sequence=VSP_001881; Name=4;

IsoId=Q9YSN1-5; Sequence=VSP_001882;

IsoId=Q9Y5N1-6; Sequence=VSP_001883;

TISSUE SPECIFICITY: Expressed predominantly in the CNS, with the greatest expression in the thalamus and caudate nucleus. The various isoforms are mainly coexpressed in brain, but their relative expression level varies in a region-specific manner. Isoforms 3 and 7 are highly expressed in the thalamus, caudate nucleus and cerebellum while isoforms 5 and 6 show a poor expression. Isoforms 5 and 6 show a high expression in the amygdala, substantia nigra, cerebral cortex and hypothalamus. Cerebral cortex and hypothalamus. Isoform 7 is not found in hypothalamus or substantia nigra.

-!- DISEASE: Defects in HRH3 are a cause of Shy-Drager syndrome [MIM:146500]. This syndrome is characterized by orthostatic hypothanion, bladder and bowel incontinence, anhidrosis, iris atrophy, amystrophy, ataxia, rigidity and tremor.

-!- MISCELLANEOUS: Does not bind to cimetidine and tripolidine. Shows modest affinity for thioperamide, imetit, N-alpha-methylhistamine and R(-)-alpha-methylhistamine. Isoforms 1 and 3 bind it with high affinity. Cerebral coupled receptor 1 family.

B., Sharma R., Cassar S., Esbenshade T.A., Hancock A.A.;

Submitted (FEB-2003) to the EMBL/GenBank/DDBJ databases.

-1- SUBCELLULAR LOCATION: Integral membrane protein (By similarity).

-1- SIMILARITY: Belongs to family 1 of G-protein coupled receptors.

Submitted (JUL-2001) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: The H3 subclass of histamine receptors could mediate thistamine signals in CNS and peripheral nervous system. Signals through the inhibition of adenylate cyclase and displays high constitutive activity (spontaneous activity in the absence of agonist) (By similarity).
-!- SUBCELULIAR LOCATION: Integral membrane protein.
-!- SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Mus musculus (Mouse).

                                                                                                                                             Isoid=Q9QYN8-4; Sequence=VSP_001888, VSP_001889;
TISSUE SPECIFICITY: Expressed abundantly in brain, most notably throughout the thalamus, the ventromedial hypothalamus and the caudate nucleus. Isoform 1 is largely predominant in all tissues. MISCELLANEOUS: Proxyfan acts as a potent neutral antagonist while thioperamide, ciproxifan and FUBA65 act as potent inverse
                                                                                                                                                                                                                                                                                                                                                                                                                           SIMILARITY: Belongs to the G-protein coupled receptor 1 family.

TISSUE SPECIFICITY: Expressed widely and abundantly throughout the
Prain. Highly expressed in discrete neuronal populations such as
pyramidal cells in cerebral correx or cerebellar Purkinje cells.
SIMILARITY: Belongs to the G-protein coupled receptor 1 family.
                                                                                                                                                                                                                                                                                      -!- FUNCTION: The H3 subclass of histamine receptors could mediate the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       lung, pancreas, skeletal muscle, prostate, small intestine, spleen, fetal liver and lymph node.

-InNUCTION: Expression is either up-regulated or down-regulated upon activation of the lymphoid tissues and this regulation may depend on the presence of IL-10 or IL-13.

-INSCELLANEOUS: Does not bind diphenhydramine, loratadine, ranitidine, cimetidine and chlorpheniramine. Shows modest affinity for dimaprit, impromidine, clobenpropit, thioperamide, burimamide clozapine, immepip and imetit. The order of inhibitory activity was imetit > clobenpropit > burimamide > thioperamide, or inhiperamide or closenpropit behaves as a partial agonist, dimaprit and impromidine show some agonist activity while clozapine behaves as a full agonist. Thioperamide shows inverse agonism (enhances CAMP activity). The order of inhibitory activity of histamine > R(-)-alphamethylhistamine > R(-)-alphamethylhistamine > R(-)-alphamethylhistamine behave as full
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                           SUBCELLULAR LOCATION: Integral membrane protein.
SUBCELLULAR LOCATION: Integral membrane protein.
SUBSCELEVENTY: Expressed primarily in the bone marrow and eosinophils. Shows preferential distribution in cells of immunological relevance such as T-cells, dendritic cells, monocytes, mast cells, neutrophils. Also expressed in a wide variety of peripheral tissues, including the heart, kidney, liver, writety of peripheral tissues, including the heart, kidney, liver,
"Identification of a histamine H4 receptor on human eosinophils - Role
                                                                                                                       Publ H.L. III, TReda S.R., Aronstam R.S.,
"cDNA clones of human proteins involved in signal transduction
sequenced by the Guthrie cDNA resource center (www.cdna.org).";
Submitted (JUL-2002) to the EMBL/GenBank/DDBJ databases.
-!- FUNCTION: The H4 subclass of histamine receptors could mediate t
histamine signals in peripheral tissues. Displays a significant
level of constitutive activity (spontaneous activity in the

Patent No. 6093545
GENERAL INFORMATION:
APPLICANT: Andrew D.J. Goodearl and Sandra Glucksman
TITLE OF INVENTION: Muscarinic Receptors and Uses Therefor
NUMBER OF SEQUENCES: 39
CORRESPONDENCE ADDRESS:
ADDRESSEE: LAHIVE & COCKFIELD, LLP
OPERATING SYSTEM: PC-DOS/MS-DOS
SOFTWARE: Patentin Release #1.0, Version #1.25
